(54) NETWORK CONTROL SYSTEM, NETWORK TERMINAL AND CONTROL TERMINAL

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a network control system capable of automatically controlling an added network terminal by means of a control terminal even when a new network terminal is added in the network control system controlling the network terminal by means of the control terminal.

SOLUTION: At the network terminal 13, an information storing device 132 stores operation information of service provided by the terminal 13 and transmits operating information of service to the control terminal 11 through a network 12. The terminal 11 analyzes operation information of this service to provide the operating environment of an added network to an operator.

## LEGAL STATUS

[Date of request for examination] 14.01.1999

[Date of sending the examiner's decision of rejection] 10.12.2002

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
